

FERTILIZERS EUROPE STATEMENT ON THE WAR IN UKRAINE

Fertilizers Europe condemns the Russian invasion of Ukraine. We are profoundly concerned about the humanitarian effects of the war and our thoughts are with all those affected.

The European fertilizer industry supports sanctions and other measures put forward by the European Union and its respective member states governments.

The European fertilizer industry is fully aware of its responsibility to provide essential goods and will therefore do its utmost best to continue supplying European farmers with nutrition products to ensure Europe's food security.

In this pursuit, Fertilizers Europe recognises that EU industry together with EU institutions and member states must act decisively to reduce the dependency on Russian raw materials and fertilizers.
